List of Tables	v
List of Figures	ix
Contributors to the Skeletal Biology Component, The African Burial Ground Project	xv
Acknowledgements	xviii

### **Section I: Background of the New York African Burial Ground Project**

<b>1</b>	Introduction (M.L. Blakey)	2
<b>2</b>	History and Comparison of Bioarchaeological Studies in the African Diaspora (M.L. Blakey)	38
<b>3</b>	Theory: An Ethical Epistemology of Publicly Engaged Biocultural Research (M.L. Blakey)	98
<b>4</b>	Laboratory Organization, Methods, and Processes (M.L. Blakey, M.E. Mack, K. Shujaa, and R. Watkins)	116

### **Section II: Origins and Arrival of Africans in Colonial New York**

<b>5</b>	Origins of the New York African Burial Ground Population: Biological Evidence of Lineage and Population Affiliation using Genetics, Craniometrics, and Dental Morphology (F.L.C. Jackson, A. Mayes, M.E. Mack, A. Froment, S.O.Y. Keita, R. Kittles, M. George, K. Shujaa, M.L. Blakey, and L.M. Rankin-Hill)	150
<b>6</b>	Isotopic and Elemental Chemistry of Teeth: Implications for Places of Birth, Forced Migration Patterns, Nutritional Status and Pollution (A. Goodman, J. Jones, J. Reid, M.E. Mack, M.L. Blakey, D. Amarasiriwardena, P. Bruton, and D. Coleman)	216

<b>7</b>	Demographic Overview of the African Burial Ground and Colonial Africans of New York (L.M. Rankin-Hill, M.L. Blakey, J.E. Howson, E. Brown, S.H.H. Carrington, and K. Shujaa)	266
<b>Section III: Life and Death in Colonial New York</b>		
<b>8</b>	Childhood Health and Dental Development (M.L. Blakey, M.E. Mack, A.R. Barrett, S.S. Mahoney, and A.H. Goodman)	306
<b>9</b>	Odontological Indicators of Disease, Diet, and Nutritional Inadequacy (M.E. Mack, A.H. Goodman, M.L. Blakey, and A. Mayes)	332
<b>10</b>	Osteological Indicators of Infectious Disease and Nutritional Inadequacy (C. Null, M.L. Blakey, K.J. Shujaa, L.M. Rankin-Hill, and S.H.H. Carrington)	351
<b>11</b>	Skeletal Indicators of Work: Musculoskeletal, Arthritic and Traumatic Effects (C. Wilczak, R. Watkins, C. Null, and M.L. Blakey)	403
<b>12</b>	Subadult Growth and Development (S.K. Goode-Null, K. Shujaa, and L.M. Rankin-Hill)	461
<b>13</b>	The Political Economy of Forced Migration: Sex Ratios, Mortality, Population, Growth and Fertility among Africans in Colonial New York (M.L. Blakey, L.M. Rankin-Hill, J.E. Howson and S.H.H. Carrington)	514
<b>14</b>	Discussion (M.L. Blakey, L.M. Rankin-Hill, A. Goodman, and F. Jackson)	541
	<b>Bibliography</b>	557

## **List of Tables**

### **Chapter 5**

5.1	Population Sources for Craniometric Analysis by Froment	165
5.2	Howells Cranial Series	172
5.3	AMNH and Keita's Series	172
5.4	Centroid Values, Functions 1 and 2	173
5.5	New York African Burial Ground Dental Traits Distribution	177
5.6	Scott and Turner Population Descriptions	179
5.7	Countries, Geographical Regions, and Historical Export Sites for Enslaved Africans	191
5.8	Molecular genetic affinities of 48 individuals of the NYABG	194
5.9	Distribution of Haplogroups in the African and African-American Populations	201
5.10	African Geographical Regions Currently Under Investigation as Sources of Genetic Polymorphisms	205
5.11	Anticipated Future Genetic Analyses of the NYABG Samples	215

### **Chapter 6**

6.1	Comparison of Dental Hard Tissues and Bone	225
6.2	Range of Element Concentrations in Human Enamel	233
6.3	African Dental Modification Patterns (Gould et al. 1984)	242
6.4	ABG Modification Patterns and Reference Populations	244
6.5	NYABG Chemical Analysis Sample	247
6.6	ICP-MS External Calibration Results for NYABG Burial 6 LM <sub>1</sub>	250

### **Chapter 7**

7.1	New York African Burial Ground Adult Mortality	274
7.2	New York African Burial Ground Subadult Mortality	275
7.3	Population of New York County, 1698-1800 Censuses	277
7.4	African Population by Age and Sex, 18 <sup>th</sup> Century Censuses	280
7.5	Sex Ratio New York City County 1703-1819	282
7.6	NYABG and Trinity Church Subadult Mortality	285
7.7	Skeletal Series of the African Diaspora	292
7.8	Mean Age at Death for Afro-American Skeletal Populations	293
7.9	NYABG, FABC and Cedar Grove Subadult Mortality by Age Group	295
7.10	New York African Burial Ground Life Table	297
7.11	New York African Burial Ground Male Life Table	299
7.12	New York African Burial Ground Female Life Table	300

## **Chapter 8**

8.1	Summary of Study Samples	309
8.2	NYABG Canine Chronology Formula and Example Calculation	313
8.3	Frequency of Hypoplasia in Males and Females at NYABG	315
8.4	Comparison of Frequencies Reported in Skeletal Populations	315
8.5	NYABG Frequency of Hypoplasia by Age Group	315
8.6	NYABG Frequency of Hypoplasia by Age and Sex: Canines and Incisors – controlling for attrition	321
8.7	NYABG Frequency of Hypoplasia by Age Group: Third Molars – controlling for attrition	322
8.8	NYABG Occurrence of Hypoplasia by Age Range	323
8.9	NYABG Occurrence of Hypoplasia by Age Intervals	323
8.10	NYABG Hypoplasia in Culturally Modified and Unmodified Permanent Teeth	328
8.11	NYABG Comparison of Hypocalcification and Hypoplasia Frequencies by Age Group	330

## **Chapter 9**

9.1	Dental Pathology Frequency - Males – Permanent Dentition	337
9.2	Dental Pathology Frequency – Females – Permanent Dentition	338
9.3	New York African Burial Ground Total Number Carious Teeth by Sex	339
9.4	Dental Pathology Frequency by sex for the permanent dentition of individuals from the New York African Burial Ground	342
9.5	Dental Pathology Frequency – Deciduous Dentition	342
9.6	New York African Burial Ground Dental Pathology Mean Comparison with Other 18 <sup>th</sup> and 19 <sup>th</sup> Century Samples (Steckel and Rose 2000)	345
9.7	New York African Burial Ground Dental Pathology Mean Comparison with Other 18 <sup>th</sup> and 19 <sup>th</sup> Century Samples (Kelly and Angel 1987)	346

## **Chapter 10**

10.1	Age Structure of Assessed Sample	357
10.2	African Diaspora Skeletal Series Discussed in this Chapter	358
10.3	Occurrence and Status of Generalized Infectious Disease	361
10.4	Generalized Infectious Disease Statistical Testing: Intra-Population	361
10.5	Generalized Infectious Disease Statistical Testing: Inter-Population	363
10.6	Occurrence of Treponemal Infection Indicators	372
10.7	Demographic Profile of Occurrence of Treponemal Infection Indicators	374
10.8	Porotic Hyperostosis: All Cranial Locations	382

10.9	Porotic Hyperostosis Statistical Testing: Intra-Population	383
10.10	Porotic Hyperostosis: Cribra Orbitalia	385
10.11	Cribra Orbitalia Statistical Testing: Intra-Population	386
10.12	Porotic Hyperostosis Statistical Testing: Inter-Population	387
10.13	Cribra Orbitalia Statistical Testing: Inter-Population	388
10.14	Medial/Lateral Bowing of the Lower Long Bones	393
10.15	Medial/Lateral Bowing Statistical Testing: Intra-Population	394
10.16	Co-occurrence of Porotic Hyperostosis with Periostitis	396
10.17	Co-occurrence of Porotic Hyperostosis with Periostitis Statistical Testing: Intra-Population.	396
10.18	Co-occurrence of Porotic Hyperostosis with Periostitis Statistical Testing: Inter-Population	397

## Chapter 11

11.1	Demography of the Sample used in Stress Marker Analysis	406
11.2	Distribution of moderate to severe vertebral osteoarthritis by sex	409
11.3	Distribution of moderate to severe vertebral osteophytosis by sex	410
11.4	Regional Distribution of Schmorl's nodes	416
11.5	Percentage of Individuals with Schmorl's nodes by Age	417
11.6	Spondylolysis and Associated Vertebral Degenerative Changes	419
11.7	Distribution of moderate to severe osteoarthritis in the upper limb	423
11.8	Distribution of moderate to severe osteoarthritis in the lower limb	426
11.9	Average moderate to severe musculoskeletal stress marker scores by age	434
11.10	MSMs frequencies in males and females	438
11.11	Skeletal Studies of MSM in Enslaved African Americans	445
11.12	Number of fractures by skeletal element in adults by sex <sup>1</sup>	453
11.13	Number of fractures by skeletal region in adult by sex	454
11.14	Number of premortem and perimortem fractures per individual	455

## Chapter 12

12.1	African-American Stature Regression Formulae as Developed by Trotter (1970, <i>cf</i> Ubelaker 1989)	471
12.2	Fetal and Neonate Stature Regression Formulae as Developed by Fazekas and Kosa (1978)	471
12.3	Regression Formulas for Calculating Stature of the Immature Remains of Male Children	474
12.4	Regression Formulas for Calculating Stature of the Immature Remains of Female Children	475
12.5	Regression Formulas for Calculating Stature of the Immature Remains of Indeterminate Children	476
12.6	Power Values for Statistical Chi-square Tests Based on Sub-sample Sizes and Magnitude of Effect.	477

12.7	$\delta l_i$ and $\delta l_{\text{mean}}$ Values for the NYABG Population Sub-sample by Sex	479
12.8	Male Stature Estimates and Growth Standard Percentile Rankings for Individuals less than 25 years of age only	484
12.9	Female Stature Estimates and Growth Standard Percentile Rankings for Individuals less than 25 years of age only	484
12.10	Occurrence of Porotic Hyperostosis in NYABG Population Sub-sample	490
12.11	Chi-square Test Results for Relationship Between PH and $\delta l_{\text{mean}}$ and Percentile Rankings for Stature	491
12.12	Generalized Infectious Lesions as Diagnosed in Long Bone Skeletal Elements	494
12.13	Chi-square Test Results for Relationship between Infectious Lesions and $\delta l_{\text{mean}}$ and Percentile Rankings for Stature	496
12.14	Distribution of Abnormal Long Bone Shape in the Total NYABG Population Sub-sample, by age and by sex	497
12.15	Distribution of Individuals with Biomechanical Stress Indicators by age and sex in the NYABG Population Sub-sample	499
12.16	Results of Chi-square Tests of Relationships between Biomechanical Stressors	501
12.17	Individuals with Craniosynostosis by Suture(s)	503
12.18	Chi-square Test Results for Relationship between Craniosynostosis and Biomechanical, Nutritional, and Infectious Indicators	504
12.19	A Comparison of NYABG $\delta l_i$ and $\delta l_{\text{mean}}$ Values with those of five Native American Populations (Sciulli 1994)	505
12.20	Results of Chi-square Tests of Relationships between Biomechanical Stressors and Abnormal Flattening of Long Bones	511

### Chapter 13

13.1	African Population by Age and Sex, 18 <sup>th</sup> Century Censuses	522
13.2	African Adult Sex Ratio New York County, 1703 – 1800	524
13.3	Population of New York County, 1698 – 1800	528

## List of Figures

### Chapter 1

1.1	Early Archaeological Excavation of the African Burial Ground	2
1.2	Map of the 18 <sup>th</sup> Century African Burial Ground, Maerschallck Plan (1755) in African Burial Ground and The Commons Historic District Designation Report, New York Landmarks Preservation Commission, February 1993	4
1.3	Trinity Church in Lower Manhattan Today	7
1.4	Rib ends from Burial 137 showing likely heat induced darkening	9
1.5	Burial 323 Transverse section of calvarium (top of skull)	11
1.6	Burial 323 Magnified saw marks	11
1.7	Mayor David Dinkins (center), Peggy King Jorde (Mayor's Liaison), and Howard Dodson (Chief, Schomburg Center) (front) are briefed on the Excavation by Michael Parrington (Principal Archaeologist for HCI and John Milner Associates).	18
1.8	Night Procession of the <i>Ties That Bind</i> Ceremony at Howard University Marking the Transfer of the African Burial Ground Ancestral Remains to an African Diasporic Cultural and Research Institution in November of 1993	24

### Chapter 2

2.1	W. Montage Cobb with a Pathological Cranium from his Documented Anatomical Collection at Howard University	59
-----	--	----

### Chapter 4

4.1	Work Space in the main "blue" laboratory	117
4.2	Data Systems Manager Douglas Fuller and Project Director Michael Blakey Discuss Organization of the Database	121
4.3	Cobb Laboratory staff	123
4.4	Safety while unwrapping burials	124
4.5	OTA Joseph Jones involved in cleaning and reconstruction.	125
4.6	Allison Davis and Keisha Hurst take anthropometric measurements	128
4.7	Comparative male and female pelvic shapes. Note the wide subpubic angle in the female (left) in relation to the male (right)	131
4.8	Geriatric left mandible for which long-standing toothlessness has obliterated most evidence of dental 'sockets' (Burial 209)	132
4.9	Cranium of infant 1-2 years of age (Burial 252)	134
4.10	Child 5-7 years of age (Burial 39)	134
4.11	Elderly Woman 50-60 years of Age (Burial 40)	135

4.12	Mandible of 9-10 year old child with permanent teeth in various stages of eruption compared with a dental aging chart (Ubelaker 1989) showing ages associated with different eruption stages	136
4.13	Deciduous teeth are shown in grey; permanent teeth are shown in white. The arrow points to a 9-year-old's development	136
4.14	Unfused epiphysis comprising the immature head of the femur of a 3-5 year old (Burial 138)	137
4.15	Unfused epiphysis of a juvenile distal femur compared to a fully fused adult epiphysis	137
4.16	Pubic symphysis of a 45-50 years old male (Burial 20, Left) and Todd's ten typical phases of age in the pubic symphysis	139
4.17	Bar Graph representing sex and age at death using average ages	141
4.18	Laboratory Director Mark Mack conducts dental recordation	143
4.19	Barely discernable porotic hyperostosis	145
4.20	Clearly present porotic hyperostosis	145
4.21	Photographer Jerome Otto Edwards and Osteologist M. Cassandra Hill photographing cranium	146
4.22	African-American Ife Shrine in the Cobb Laboratory	148

## Chapter 5

5.1	Major African exit points for enslaved individuals bound for New York in the seventeenth and eighteenth century	157
5.2	Exit Regions for enslaved Africans bound for New York in the seventeenth and eighteenth century in Central, and South America and the Caribbean	158
5.3	New York African Burial Ground Skull Shape Analysis (Mahalanobis Distance)	167
5.4	Scatter Plot of Craniometric Distance	168
5.5	Worldwide populations based on 23 crown and root traits (Scott and Turner 1997)	176
5.6	New York African Burial Ground compared to other world populations based on 23 crown and root traits (Scott and Turner 1997)	182
5.7	New York African Burial Ground compared to other Western African populations and Europe based on 23 crown and root traits (Scott and Turner 1997)	183
5.8	New York African Burial Ground compared to other African populations based on 23 crown and root traits (Scott and Turner 1997)	183

## Chapter 6

6.1	Elemental Uptake/Deposition Model	219
6.2	Longitudinal Tooth Section	224

6.3	Outridge Pb Counts	227
6.4	Price Diagram of Sr Flow	231
6.5	Broad geographic pattern of strontium isotope distribution	235
6.6	Raster ablation (Burial 23, URM1)	251
6.7	ESA Cluster Diagram	253
6.8	Dremil Drilling (Burial 266, LRM1)	256
6.9	Strontium Isotopes Chart	258
6.10	Lead Variation	261

## **Chapter 7**

7.1	New York African Burial Ground Mortality	272
7.2	New York African Burial Ground Mortality By Sex and Age	274
7.3	Adult Mortality NYABG and Trinity Church	284
7.4	Mortality NYABG and Trinity Church by Sex and Age	284
7.5	Subadult Mortality NYABG and Trinity Church	286
7.6	Survivorship	298
7.7	Life Expectancy	301

## **Chapter 8**

8.1	Linear Enamel Hypoplastic Lesions in the Anterior Maxillary Permanent Dentition	308
8.2	Bands of Discoloration caused by Hypocalcification in the Anterior Maxillary Permanent Dentition	308
8.3	Deciduous Mandibular Dentition with Single Non-Linear Hypoplastic Pit in the Right Canine. This Individual Also Appears to Have Been Anemic.	311
8.4	Permanent Mandibular Canine and Lateral Incisor with Linear Hypoplasia	312
8.5	NYABG Presence of Hypoplasia by Age	318
8.6	NYABG Hypoplasia in Third Molars	319
8.7	Dental Modification	327

## **Chapter 9**

9.1	Diagenetic staining affecting dentition in a 55 – 65 year old female (Burial 241)	334
9.2	Examples of the photographic record (Burial 95, a subadult aged 7-12 years)	335
9.3	Total Number of Carious Teeth by Sex	340
9.4	Molar caries in a male aged 25 – 35 years (Burial 101)	340
9.5	Abscessing in a female aged 25 – 35 years (Burial 266)	341
9.6	Caries Formation in a female aged 35 – 40 years (Burial 107)	341
9.7	Total number of teeth affected by caries in subadults	343

9.8	Caries, abscessing, and enamel hypoplasia in a subadult aged 5 – 7 years (Burial 39)	344
9.9	Radiograph of incisor hypodontia in a subadult aged 4 – 6 years (Burial 17)	348
9.10	Dental crowding in a subadult aged 5 – 7 years (Burial 39)	348
9.11	Maxillary molar agenesis in a male aged 30 – 40 years (Burial 379)	349
9.12	An example of a supernumerary tooth in a female aged 35 – 45 years (Burial 12)	350

## Chapter 10

10.1	Active periostitis on left posterior ulna of a 35 – 45 year old male (Burial 70)	354
10.2	Active periostitis on left posterior ulna of a 35 – 45 year old male, magnified (Burial 70)	354
10.3	Healed, sclerotic periostitis in right lateral tibia of an adult male (Burial 69)	355
10.4	Healed, sclerotic periostitis on left lateral tibia of a 45 – 50 year old male, magnified (Burial 20)	355
10.5	Population Comparison of Periostitis Presence	363
10.6	Subadult Distribution of Periostitis by Age	364
10.7	Percentage of Age Group with Periostitis	365
10.8	Comparison of Periostitis by Age Group: Subadults	366
10.9	Age Distribution of Adults with Periostitis	366
10.10	Adult Distribution of Periostitis by Age and Sex	368
10.11	Comparison of Periostitis by Age: Males	368
10.12	Comparison of Periostitis by Age: Females	369
10.13	Osteomyelitis in the right anterior distal femur (Burial 32, 50-60 year old male)	371
10.14	Osteomyelitis in the right anterior distal femur, magnified (Burial 32, 50-60 year old male)	371
10.15	Left femoral midshaft of Burial 101 (26-35 year old male, top) showing ‘saber shin’ bowing in comparison to a healthy femur from the Cobb collection (CC2 at bottom)	372
10.16	The cranial lesion (arrow) in the left parietal of a 55-65 year old female (Burial 230) is more similar to stellate scars than any other lesion observed in the African Burial Ground population, yet it lacks the billowing of its margins and other typical characteristics of such scars (Most probably a depression fracture)	377
10.17	Cobb Collection (CC101) left femur showing cloaca in a person who died while diagnosed with syphilis in 1937 (left). An adult male of at least 40 years of age in the African Burial Ground population (Burial 418) was found to have similar resorptive lesions in the right posterior proximal	377

	ulna (center) and left posterior proximal femur (right)	
	Such diagnostic evidence of syphilis was otherwise not observed among the skeletal remains of New York Africans	
10.18	Porotic hyperostosis in right posterior parietal (Burial 138, 3-5 years old)	381
10.19	Porotic hyperostosis (Burial 64, 4.5-10.5 months old)	381
10.20	Thickened diploe of occipital adjacent to lambda, compared with a normal specimen at the same location (Burial 151, 35-45 year old male)	382
10.21	Cribra orbitalia of the left eye orbit (Burial 6, 25-30 year old male)	384
10.22	Cribra orbitalia of the right orbit (Burial 39, 5-7 years old)	385
10.23	Population Comparison of Porotic Hyperostosis Presence	386
10.24	Population Comparison of Cribra Orbitalia Presence	387
10.25	Subadult Distribution of Porotic Hyperostosis by Age	389
10.26	Percentage of Age Group with Porotic Hyperostosis	390
10.27	Comparison of Porotic Hyperostosis by AgeGroup: Sub-adults	391
10.28	Adult Distribution of Porotic Hyperostosis by Age and Sex	392
10.29	Comparison of Porotic Hyperostosis by Age: Females	392
10.30	Comparison of Porotic Hyperostosis by Age: Males	395
10.31	Co-occurrence of Periostitis and Porotic Hyperostosis: Comparison of Populations	397

## Chapter 11

11.1	Severe osteoarthritis of a vertebral articular processes in a female aged 50-60 years old. (Burial 40)	408
11.2	Severe osteophytosis (left arrows) and osteoarthritis (right arrows) of a lumbar vertebra in a male aged 35-45 years (Burial 63)	408
11.3	Age and incidence moderate to severe vertebral osteoarthritis	411
11.4	Age and incidence of moderate to severe osteophytosis	411
11.5	Severe osteophytosis of the cervical vertebrae in a male aged 35-45 years (Burial 63)	413
11.6	Schmorl's node depression of a lumbar vertebra in a male aged 35-45 years (Burial 70)	416
11.7	Vertebral spondylolysis in a female aged 35-40 years (Burial 107)	418
11.8	Osteoarthritis with marginal lipping in the wrist of a female aged 50-60 years (Burial 40)	424
11.9	Mild to moderate osteoarthritis in the humeral articular surface of the elbow in a male aged 30-40. A. anterior view, B. posterior view (Burial 11)	424
11.10	Osteoarthritis of the ankle in a female aged 50-60 A. superior aspect of the distal ankle articulations B. the proximal ankle articulation on the fibula (Burial 40)	425

11.11	Osteoarthritis in the ankle and foot of a male aged 40-50 years (Burial 238)	425
11.12	Age and incidence of moderate to severe osteoarthritis in the upper limb	428
11.13	Age and incidence of moderate to severe osteoarthritis in the lower limb	428
11.14	Age and incidence of moderate to severe osteoarthritis of the elbow	429
11.15	Severe Hypertrophy of the Ulnar Supinator Insertions in a male aged 40-50 Years (Burial 369)	432
11.16	Stress Lesion of the Right Humerus in a male aged 20-23 years (Burial 181)	432
11.17	Hypertrophy of the biceps brachii insertion of the radii in a male aged 40-45 years (Burial 10)	436
11.18	Hypertrophy of the linea asperae of the femora in a female aged 40-50 years (Burial 328)	436
11.19	Hypertrophy of the gluteus maximus insertions of the femora in a male aged 17-18 years (Burial 174)	437
11.20	Hypertrophy of the brachialis insertions of the ulnae in a female aged 25-35 years (Burial 223)	437
11.21	Ring Fractures of the base of the skull in a female aged 35-40 years (Burial 107)	451
11.22	Seventeenth Century Drawing of Africans in New Amsterdam showing normal axial loading	452
11.23	Perimortem fractures of the humeri in a female aged 18 - 20 years (Burial 205)	456
11.24	Perimortem fractures of the femora in a female aged 18 - 20 years (Burial 205)	456
11.25	Premortem occipital fracture in a subadult aged 13 - 15 years (Burial 253)	457
11.26	Burial 25 is shown in situ with musket ball	459
11.27	Spiral fracture in lower arm of Burial 25	459

## Chapter 12

12.1	Mean Standardized Long Bone Measures	480
12.2	New York African Burial Ground Stature Estimates: Male	482
12.3	New York African Burial Ground Stature Estimates: Female	483
12.4	New York African Burial Ground Stature Estimates: Indeterminate Sex	483
12.5	Comparison of Individual $\delta l_{\text{mean}}$ Values and Stature Estimates by Sex	486
12.6	Comparison of Average Male Statures: New York African Burial Ground and Steckel	508

12.7	Comparison of Average Female Statures: New York African Burial Ground and Steckel	509
12.8	Comparison of Statures: New York African Burial Ground Indeterminate, Steckel Male and Steckel Female	509

13.2	African Child-Woman Ratio New York City	537
13.3	Summary of Relevant Factors of the Political Economic Regime of Colonial New York	540

## **Contributors to the Skeletal Biology Component, The African Burial Ground Project:**

### **Project Director and Scientific Director**

Michael L. Blakey, Ph.D.

### **Laboratory Director and Osteologist**

Mark E. Mack, M.A.

### **Office Manager and Administrative Assistant**

Reba Brewington, B.A.

### **Osteologist**

M. Cassandra Hill, M.A., Ph.D.\*

### **Osteological Technicians**

Autumn Barrett

Allison Davis

Raynard Davis

Ena Fox

Shannon Mahoney

Susan Good-Null, M.A., Ph.D.\*

Monde Imoh, Ph.D.

Christopher Null, M.A., A.B.D.\*

Kenya Shujaa, M.A.\*

Rachel Watkins, M.A., A.B.D.\*

### **Osteological Technician Assistants**

Valarian Abrams

Paula Allen

Marc Alston

Darious Annis

Augustus Billy

Alan Blanc

Antonia Christian

Jeffrey Coleman

Lauren Collins

Cyndi Douglas

Jacinta Elder-Arrington

Nardos Fessaha, Ph.D.\*

April Flint

Gabriel Franke, M.A.

Paul Gattis

Oumuyiwa Gbadegehin

Richlyn Goddard, Ph.D.

Karyn Goodwin

Yasin Gregg

Janna Gruber

Fayola Herod

Michael Hunter

Keisha Hurst

Joseph Jones

Antoinette Kearney

Irina Koretsky, M.S.

Dannette Lambert

Teresa Leslie, M.A.,\* Ph.D.\*

Arion Mayes, M.A., Ph.D.\*

Moses Nwulia

Auriel Perkins

Keisha Rankine

Clifford Russell

Joann Sampson

Jobita Smith

Azhar Talibi, M.A.

Brent Terry, M.A.

Emile Webster

Shani Wright

**Research Assistants**

Pamela Brown  
Songhai Carter  
Christa Dickey  
Lesley Payne  
Arana Hankin  
Nicole Harvey  
Jeffrey Lim  
Chad Taylor  
Walidah West

**Senior Medical Photographer**

**Data Systems Manager**

Douglas Fuller, M.A.  
Javier Urcid, Ph.D.  
Christopher Null

**Secretaries**

Denise Joseph  
Marna Lewis  
Andrea Reid  
Raquel Scott  
Percival Taylor  
Sharon Wiltshire

**Botanists**

Lafayette Frederick, Ph.D.  
Monde Emoh, Ph.D.

**Consultants for this report**

Richard Kittles, Ph.D.  
Matthew George, Ph.D.  
Thomas Stafford, Ph.D.  
Shomarka O.Y. Keita, M.S., M.A., M.D.

**African Burial Ground Project Directors**

Michael L Blakey, Ph.D., Scientific Director, College of William and Mary, and Howard University  
Edna Medford, Ph.D., Associate Director for History, Howard University  
Sherrill D. Wilson, Ph.D., Director, Office of Public Education and Interpretation  
Alan H. Goodman, Ph.D., Associate Director for Chemical Studies, Hampshire College  
Jean Howson, Ph.D., Archaeology Laboratory Director, Howard University  
Fatimah L. C. Jackson, Ph.D., Associate Director for Genetics, University of Maryland  
Mark E. Mack, M.A., Cobb Laboratory Director, Howard University

Warren Perry, Ph.D., Associate Director for Archaeology, Central Connecticut State University

Lesley M. Rankin-Hill, Ph.D., Associate Director for Skeletal Biology, University of Oklahoma

**African Burial Ground Project Administration/Management**

O. Jackson Cole, Ph.D., Executive in Charge, Howard University

James A. Donaldson, Ph.D., Project Manager, Howard University

\*Degree received post-recording.

## ACKNOWLEDGEMENTS

It would be impossible to thank all of those in every walk of life who have helped the African Burial Ground Project over the past 12 years. All of those who stood for its preservation and dignity do, however, bear some responsibility for creating the information within this report, and we researchers are deeply indebted to them. We want to thank our supporters: the school children and their teachers. We also thank the churches, the civic and cultural organizations, the grass-roots political organizations, and the hundreds of visitors from around the world, who visited our laboratories and offices. Other organizations that deserve recognition are: the Federal Steering Committee, the Schomberg Center, Friends of the African Burial Ground, the Committee of Descendants, Transafrica Forum, Malik Shabazz Human Rights Institute (NYC), Lift Every Voice, Inc. (Los Angeles), and many other organizations and institutions whose members have made this work possible by their moral and political support. Lastly, we would like to acknowledge New York City, State legislators and their national counterparts, as well as our academic and professional colleagues. As opportunities are presented, we will continue to recognize every individual effort that has made this project possible.

We want especially to take the opportunity to thank those who assisted in the preparation of this report. Even though most are named on the preceding pages, we want to especially thank the staffs of the Howard University Cobb Laboratory, the College of William and Mary Institute for Historical Biology, and the Department of Anthropology at the University of Oklahoma. These individuals conducted research and prepared reports under extraordinarily difficult circumstances, and they did this in the spirit of humane commitment and with high standards. These students, technicians, and senior

researchers and directors often sacrificed by working without funding. Although at times there was uncertainty about the security of the project's future, they were nevertheless faithful to the mission for which these volumes mark the culminating success. It is only by virtue of that commitment that we were able to succeed. Among these there were those who devoted many years of their lives working to see that the laboratories and offices functioned for researchers and the public—that the work was done and the data properly organized. These prominently include the office manager of the Cobb Laboratory, Reba Brewington, and its laboratory director, Mark Mack, who devoted at least a decade of their lives to long days of excellence on behalf of the history of the colonial Africans we report on here. All of the writing of this final report and previous drafts relied on their contributions.

The final draft report was prepared starting in January 2003 and the final report unedited version was completed and submitted for transmission to the members of the peer review board near the end of June 2004. In the course of this work, as preparation of the final report versions, involving the merger of submissions from the various authors, was undertaken, all of the database, imaging, and text problems that had not occurred during the writing of the individual chapters and completion of the initial draft versions began to emerge. The smart and dedicated work of Christopher Null of the University of Massachusetts-Amherst and Shannon Mahoney at William and Mary corrected and refined the database and kept the information flowing to the authors. Autumn Barrett, also of the Institute at William and Mary, performed tirelessly and with an extraordinary range of skills as our editorial assistant. All of this was done in addition to their own graduate work and research contributions to the project. Thanks also to Cecelia Moore,

administrative assistant, for unflinchingly hard work and dedication to the writing project. Paul Gattis at the University of Oklahoma also contributed to final database development in essential and important ways. Ryan Seltzer of Illinois State University provided key statistical advice. The project has been enormously fortunate to have received the focused attention of these special individuals.

Standing behind us were mentors and senior colleagues without whom there may have been more open fronts of professional warfare than we could have handled. George Armelagos at Emory University and Don Ortner of the Smithsonian Institution have given generously and courageously of their support to this project. As Colleagues who shared our goals, Howard Dodson and Leith Mullings worked tirelessly from the very beginning to ensure that our efforts on behalf of this project received a fair airing in New York. Finally, we thank the three peer reviewers for useful criticisms of drafts of this manuscript.

Michael L. Blakey and Lesley M. Rankin-Hill

\*\*\*\*\*

Howard University gratefully acknowledges the efforts of the African Burial Ground project directors, under the leadership of Professor Michael L. Blakey, the other authors, and the Skeletal Biology Component research team members for their contributions to this report. A tremendous debt of gratitude is owed to the three members of the Advisory Review Board (ARB), jointly appointed by the GSA and Howard, for the excellence and professionalism of the critiques that they provided for the several iterations of this final report. The staff and other contributors of the subcontractor, the College of William and Mary Institute for Historical Biology, again under the leadership of Professor Blakey, also are acknowledged for their work.

In addition, several individuals at Howard University contributed significantly to the preparation and production of the *Skeletal Biology Final Report* volumes. In particular, appreciation is expressed to Ms. Alma Kemp, administrative assistant, and Ms. Sharon Brown, administrative officer, Office of the Dean, College of Arts and Sciences, for their conscientious efforts in handling administrative tasks in the college associated with report production, as well as their careful word processing of the final document. Ms. Kemp was also the key person over the last two years with responsibility for the ABG project's administrative interface with the university's Office of Research Administration related to the timely processing of documents. Ms. Lori Sweet, administrative assistant, Office of the President, was responsible for word processing and proofing several chapters of the final report. Ms. K. Denise Moore, special assistant to the President, assisted with word processing, formatting and proofing of sections of this final report. The technical expertise brought to this enterprise by both Mr. Vancito Wallace, senior technology officer in the Office of the Provost, and Ms. Stephanie Payne-Roberts, technical assistant, Office of the Dean, College of Arts and Sciences, was crucial to the capacity to incorporate the many illustrations, tables, figures, and images that are found in this report. Mr. David Austin, coordinator of duplicating services, College of Arts and Sciences, was responsible for copying and binding the report. The talents of Ms. Regina Drake, technical writer, Office of the Provost, were utilized in copyediting and coordinating formatting of the production report. In addition, James A. Donaldson and O. Jackson Cole assumed primary responsibility for copyediting and review of the production report.
